**METHODS AND ALGORITHMS OF
DIGITAL IMAGE PROCESSING.
SOFTWARE IMPLEMENTATION
IN MATLAB**

Kyiv- 2023

УДК 004.9 : 51-74 : 519.688
М 61

*Рекомендовано до друку Вченою радою Київського міжнародного
університету
(протокол № 10 від 29.05.2023 р.).*

Наукові редактори:

Щербак Леонід Миколайович, доктор технічних наук, професор,
Лауреат державної премії України в галузі науки і техніки, провідний
науковий співробітник Інституту загальної енергетики НАН України.

Рецензенти:

Мейш Юлія Анатоліївна – доктор технічних наук, професор кафедри
вищої математики Національного транспортного університету;

Штанько Анатолій Петрович, кандидат технічних наук, доцент
кафедри комп'ютерних наук Київського міжнародного університету.

**Methods and Algorithms of Digital Image Processing. Software
M 61 Implementation in MATLAB (updated): tutorial for students
majoring in 121 – “Software Engineering”, 122 – “Computer Science
and Information Technology”, 125 – “Cybersecurity”. Kyiv
International University, 2023. 292 p.
ISBN 978-617-651-232-5**

The textbook contains methods and algorithms for digital image processing used to highlight the contours of graphic elements in images, methods of interpolating images using numerical interpolation methods, methods of modern digital image processing in various applications based on the equations of mathematical physics and graphic processing methods real-time with elements of machine learning. The guide provides steganographic digital image processing techniques that are widely used in the protection of graphics, such as copyright objects.

The appendices of the manual contain the main software implementations of methods and algorithms in the MATLAB application software package, which are used in practice, as well as the results of experiments of the considered problems.

The textbook is intended for students majoring in Computer Science and Information Technology, graduate students of technical specialties, teachers and researchers involved in digital graphics processing.

CONTENT

INTRODUCTION	7
CHAPTER 1. IMAGE PROCESSING TASKS. MATLAB CAPABILITIES	8
1.1. Image processing methods	8
1.2. Presenting an image on a computer	9
1.3. Development of subroutines in MATLAB	10
1.4. Images in MATLAB and Image Processing Toolbox.....	14
Conclusions to the first section	35
References	36
CHAPTER 2. DRAWING OUTLETS OF IMAGE OBJECTS. METHODS, ALGORITHMS AND THEIR SOFTWARE IMPLEMENTATION	37
2.1. Mathematical model of color image	37
2.2. Binarization of images	37
2.3. Boundary selection matrix filters	43
2.4. Gradient method of border selection.	54
2.5. Bernsen's method	54
2.6. Bayesian method	55
2.7. The method of k-means	56
2.8. Testing of software implemented methods	59
Conclusions to the second section	63
References	64
CHAPTER 3. INTERPOLATION OF IMAGES. METHODS AND THEIR SOFTWARE IMPLEMENTATION IN THE MATLAB SOFTWARE PACKAGE	66
3.1. General concepts	66
3.2. Linear interpolation	70
3.3. Polynomial interpolation	73
3.4. Fourier space interpolation	76
3.5. Interpolation using spline functions	78
3.6. Least squares interpolation	81
Conclusions to the third section	84
References	84

CHAPTER 4. APPLICATION OF EQUATIONS OF MATHEMATICAL PHYSICS FOR DIGITAL IMAGE PROCESSING	85
4.1. Poisson's equation and its application in science and technology	85
4.2. Theoretical information for numerical solution of equations of mathematical physics	85
4.3. Features of the MATLAB environment in solving problems of mathematical physics	91
4.4. Using the MATLAB environment to solve the Poisson equation.....	92
4.5. Application of the Poisson equation in image processing problems	93
4.5.1. Recover an image by its vector gradient field	93
4.5.2. The problem of seamless cloning of images	102
4.5.3. The problem of mixing image gradients	107
4.5.4. Edit image areas	110
4.5.5. Extend the brightness range of the pixels of the input image	112
4.5.6. Recover unknown image area	119
4.5.7. Mix images taken day and night	120
4.5.8. Remove image artifacts using a gradient projection	121
4.5.9. Remove shadows in the image	121
Conclusions to the fourth section	122
References	124
CHAPTER 5. REAL-TIME IMAGE PROCESSING. VIOLA-JONES ALGORITHM AND ITS IMPLEMENTATION	126
5.1. Relevance and practical use of real-time image processing	126
5.2. Viola-Jones algorithm as the basis of the search for faces	127
5.3. The main idea of the face search algorithm.....	127
5.4. Algorithm description	128
5.4.1. The principle of the scan window	128
5.4.2. Integral representation of images	129
5.4.3. The Haar sign	131
5.4.4. Scan window	132

5.4.5. The process of machine learning	133
5.4.6. Classifier training in the Viola-Jones method	134
5.5. Adaboost classifier gain algorithm	140
5.6. Implementation of the algorithm in the MATLAB environment	140
5.6.1. User interface development	140
5.6.2. Main fragments of software implementation	141
5.6.3. Software testing	143
5.7. Comparison with the results of the ToolBox application software package MATLAB	147
Conclusions to the fifth chapter	147
References	148
CHAPTER 6. VIDEO FLOW PROCESSING AND FACE SEARCH IN FRAMES	149
6.1. Pre-processing of images by matrix filters	149
6.1.1. Apply a median filter when processing images and finding faces in real time	149
6.1.2. Fragment of software implementation	149
6.2. Capture images from your camcorder in MATLAB	150
6.2.1. Install the necessary MATLAB components to work with the webcam	150
6.2.2. Get a stream of images	157
6.3.1. MATLAB video presentation	158
6.3.2. Convert frames to full color images	158
6.4. Fragments of software implementation in MATLAB	159
6.5. Functional modules	159
6.6. Testing of developed programs	160
Conclusions to the sixth chapter	163
References	163
CHAPTER 7. METHODS AND ALGORITHMS OF PROTECTION OF GRAPHIC OBJECTS OF ELECTRONIC DOCUMENT CIRCULATION	165
7.1. Combined method of embedding textual information in graphic documents	165
7.2. Embedding textual information. Pre-processing of the text	167

7.3. Description of encoding algorithms for processed textual information.....	167
7.4. Embedding information in the image	176
7.5. Use cryptosystems to protect graphics	184
7.5.1. Choice of cryptosystem	184
7.5.2. Modification of the cryptosystem	185
7.5.3. Stability of the system of protection of the built-in information	185
7.6. Fragments of software implementation of the protection subsystem	187
7.6.1. Software implementation of the main module of information embedding	187
7.6.2. System testing	195
Conclusions to the seventh chapter	199
References	200
GENERAL CONCLUSIONS	201
APPENDIX A. SOFTWARE IMPLEMENTATION AND MATRIX TESTING IMAGE FILTERING	202
APPENDIX B. SOFTWARE IMPLEMENTATION OF INTERPOLATION METHODS	211
APPENDIX C. SOFTWARE IMPLEMENTATIONS OF SEGMENTATION METHODS IN THE MATLAB SYSTEM PACKAGE	232
APPENDIX D. IMPLEMENTATION AND TESTING OF BASIC METHODS AND ALGORITHMS FOR IMAGE PROCESSING USING THE POISSON EQUATION	242
APPENDIX E. IMPLEMENTATION OF VIOLA-JONES ALGORITHM FOR FACE SEARCH IN IMAGES	249
APPENDIX F. IMPLEMENTATION AND TESTING OF IMAGE PROCESSING PROGRAMS USING THE POISSON EQUATION	258
APPENDIX G. SOFTWARE IMPLEMENTATIONS OF STEGANOGRAPHIC METHODS DIGITAL DATA PROCESSING AND TESTING	277
